

Vista Services Optimizer

Product name: Vista Services Optimizer.

Product License: GNU General Public License.

System Requirements:

Microsoft Windows Vista Home Basic/Home Premium/Ultimate/Business Edition with SP1

Microsoft .NET Framework 3.5 with SP1

1024x768 screen resolution (1440x900 recommended).

Product Description:

- A standard Vista installation has many services turned on and running in the background that you may not have any use for, consuming CPU power and memory that can potentially slow down your system. We can solve this problem by trying to tweak Windows services by stopping and disabling unused services using Microsoft Management Console, but how we can do this in a safe way, as optimizing Windows services in a wrong way may lead to security risks, performance problems or system instability.
- Vista Services Optimizer is an open source free optimization utility that enables you to tweak Windows services in an easy, automatic and safe way without requiring any technical knowledge based on how you use your computer.
- Vista Services Optimizer provides easy to understand checkbox options to tune your system for your personal needs. Vista Services Optimizer is a very safe optimization utility, as you can restore your Windows service settings to their defaults at any time in case of problems using Smart Rescue Center feature.
- Vista Services Optimizer analyzes your system and suggests services that can be safely turned off based on the way you use your computer, installed software and attached hardware. You can choose to perform an automatic tune-up based on what is suitable for your system, or use a manual tune-up that lets you select from a more detailed list of features that you want to disable.

Product Features:

Easy To Use:

Vista Services Optimizer is an easy to use open source optimization utility that enables you to improve your Windows Vista performance and security with easy to understand checkbox options and simple mouse clicks and does not require any technical knowledge.

Safe TuneUp:

Vista Services Optimizer is a very safe tweaking utility that can optimize Windows Vista performance and security in a safe way without causing any harm to your system. Smart Rescue Center helps you undo any changes that Vista Services Optimizer has made to your system configurations in case of problems.

Services Diagnostics:

Services Diagnostics feature enables you to inspect your Windows Vista performance and security status according to your current system services configurations and how you are using your computer and provides solutions for certain performance and security problems.

Automatic TuneUp:

Vista Services Optimizer can tweak your Windows Vista in an automatic way with a single click, by stopping and disabling useless and unwanted Windows services according to the way you use your computer, attached hardware and installed software.

Manual TuneUp:

Vista Services Optimizer includes Manual TuneUp feature that enables you to optimize your Windows Vista services in an advanced way. You can specify the Windows Service you want to Optimize, Restore or Query information using easy to understand checkbox options.

Services Profiles:

Vista Services Optimizer includes Services Profiles feature that enables you to save your services optimization options into a file called “Windows Services Profile” that helps you apply your different optimization options in certain situations in just few seconds.

Quick Guide:

- Double-click on Vista Services Optimizer's shortcut on desktop to open up the main window. The main window gives you an instant idea of how your machine is performing.

- The first thing you might want to do is run a Service Diagnostic test. When you run this you are examining performance and security of your system. You will need to select Sharing options (if your computer is sharing files and if it has an network connection) as well as specify attached hardware, firewall options, and current compatibility issues.

- The results will be in the form of suggestion that will help to make your Vista installation much more efficient.

- The Manual Tuneup allows you to specify what to change for your tune-up.

- The Automatic Tuneup option requires you to answer only a few simple questions that relate to how you use your computer. Based on these answers, Vista Services Optimizer will tune Vista to perform best for your needs.

- Once you have selected the type of tune-up you want and configured any options, click the Apply Changes to begin the tune-up.
- A typically tune-up will take only a minute or so. Once the tune-up is complete, you will receive a detailed report of what was done, and then Vista Services Optimizer will request a restart of Windows to complete the process. Go ahead with this reboot.
